

Supplementary figure S2. Kaplan-Meier survival curves in patients who underwent primary tumor resection and also had multiple brain metastases (subgroup 2).

Lower PD-L1 expression of tumor cells (TC) is associated with a better survival after brain metastasis surgery. In addition, lower PD-1 expression of immune cells (IC) is associated with a tendency for better overall survival. Due to the relatively small number of cases in some of the groups, however, the figure mostly serves demonstrative purposes.
